APPETITE

WEIGHT
LOSS

SORE JOINTS

YELLOW SKIN
AND EYES

PALE STOOLS,
DARK URINE

STOMACH
PAIN

Few people have symptoms. When symptoms do appear, they can be severe. The only way to know if you have hepatitis is to have a blood test.

If you test positive, we will help you to seek healthcare to prevent future illness and to avoid spreading the virus.

Infection

Hepatitis B and C are more infectious than HIV and are spread when infected blood or body fluids enters someone's body.

Testing

You can be tested for hepatitis B and C at this facility as part of the Bristol Myers Squibb Foundation Viral Hepatitis Initiative. Speak to a health worker at this site to find out more.

Protecting yourself

Use sterile equipment if you use drugs

Use condoms and lubricant when you have sex

Never share nail clippers, toothbrushes or razors

Vaccination? You can be vaccinated for hepatitis B

Cure? Both infections can be managed and hepatitis C can be cured.
